

ABSTRACT

Alfa interferon (α -IFN or alpha-interferon) and liposomal all-trans retinoic acid is useful in cancer treatment with particular reference to renal cancer. Optionally, a regimen of α -interferon from about 3 to about 5 million units sc daily and liposomal all-trans retinoic acid at from about 15 mg/m² to about 90mg/m², or about 140mg/m², or about 300mg/m² or more. Dosage periodicity of about three times per week for both drugs in about 8 week cycles is useful.
